

OUR MISSION

Drinking Factory offers beverage products of recognized quality, but through an innovative system designed to significantly reduce the environmental impact, both in terms of energy consumption and waste creation. Our system also ensures an improvement in logistics efficiency and a high cost reduction.

COCKTAIL SOLUTIONS

OUR PRODUCTS

DrinkIng Factory offers products taken from original recipes and uses the highest quality materials. We guarantee a stable and constant product over the time.

We propose our product in 100% recyclable PET kegs, which have a food-safe bag inside that guarantees the best possible preservation of the drink.

Our dispensers come with a built-in compressor and cooler. The compressor allows you to avoid the use of CO2 cylinders, while the chiller guarantees a quick service around 2°C.

Serving cocktails in a keg has countless advantages, such as the dispensing of at least 10 drinks per minute, always identical cocktails, elimination of any type of waste, whoever serves the cocktails does not have to know how to make them, etc.

There is also a huge impact on logistics level, given the significant reduction in space occupation, avoiding the use of refrigerators and having bottles to dispose of.
